

Application Workspace Overview

Last Modified on 05.08.26

Application Workspace removes the complexity around the delivery method of the applications and can assist you in your process of ensuring the stability, reliability, and optimal functioning of applications and other resources across company. Through the catalog of applications, every eligible user is able to request or gain access to apps in compliance with a standardized workflow.

Application icons are displayed via a customizable web portal/desktop launcher that allows users to personalize the look and feel of their workspace according to their own needs.

Read more about Application Workspace's architecture and deployment methods in the [Architecture](#) article.

Add-on licenses

The following add-ons are available as separate licenses that can further enhance both the user experience as well as automate tasks to make it easier for the system administrator:

Access Manager

Access Manager is a completely integrated single sign-on solution that works smoothly with Application Workspace to provide simple, contextual, immediate access to the hundreds of applications your business needs to keep moving.

For information about identity providers and connectors, see [Access Manager](#).

Release and Patch Management

Release & Patch Management assists you in ensuring that the latest patches and updates run on devices across all applications, versions, platforms, and environments.
