

Register an Agent Gateway Using Enrollment Keys

Last Modified on 2026-07-21

During Right Click Tools installation, you can choose to register a Recast Agent Gateway with your Recast Management Server using an enrollment key.

To register an Agent Gateway using an enrollment key in the Recast Agent Gateway installer:

1. On the installer's **Recast Management Server Configuration** page, enable **Install with an Enrollment Key**.

The screenshot shows the 'Recast Agent Gateway - Setup' window. The 'Recast Management Server Configuration' section is active. It contains fields for 'Server Name', 'Port' (set to 444), and an 'Enrollment Key'. There is a 'Test Connection' button and a checkbox labeled 'Install with an Enrollment Key' which is checked. At the bottom, there are 'Previous', 'Install', and 'Cancel' buttons.

2. On the Recast Management Server **Enrollment Keys** page, click **Regenerate Key** to ensure that any previously used enrollment keys are no longer valid. (optional)

3. Click **Copy** beside the Agent Gateway enrollment key.

Enrollment Keys

Enrollment keys provide secure authentication for Recast Agents, Recast Proxies, and Recast Agent Gateways during their initial enrollment with Recast Management Server. [Learn More](#)

Agent Enrollment Key ?
