

Automatic logon only in Intranet zone

Last Modified on 2026-06-25

If you select Kiosk Mode to launch the browser full-screen, Microsoft Edge will open an InPrivate window in full screen. This may prevent Edge from leveraging the **Automatic logon only in Internet zone** setting.

To work around this limitation, set the InPrivateModeAvailability registry key to 1, which disables InPrivate mode.

To learn more, see [Microsoft Edge Browser Policy Documentation InPrivateModeAvailability](#) | [Microsoft Learn](#)
