

New-LiquitAppSettingExcludedItem

Last Modified on 2026-08-07

Adds an Excluded Item to an existing Included Item. An Excluded Item defines a sub-path or sub-key within an Included Item that should be skipped during capture. It is always a child of an `AppSettingIncludedItem`.

Syntax

```
# Via parent IncludedItem entity
New-LiquitAppSettingExcludedItem
  [-Parent] <AppSettingIncludedItem>
  -Name <string>
  -ValueType <ExcludedItemValueType>
  -Value <string>
  [-WhatIf] [-Confirm]

# Via parent IncludedItem ID
New-LiquitAppSettingExcludedItem
  [-ID] <Guid>
  -Name <string>
  -ValueType <ExcludedItemValueType>
  -Value <string>
  [-WhatIf] [-Confirm]
```

Parameters

Parameter	Type	Position	Mandatory	Description
Parent	AppSettingIncludedItem	0	Yes (set byParentEntity)	The Included Item to add an exclusion to.
ID	Guid	0	Yes (set byParentId)	ID of the parent Included Item.
Name	string	—	Yes	Display name for this excluded item.
ValueType	ExcludedItemValueType	—	Yes	Type of location to exclude. See ExcludedItemValueType .
Value	string	—	Yes	Path, filename, extension, or registry key/value name to exclude, relative to the parent Included Item's <code>Root</code> . A leading <code>\</code> is stripped automatically.

Output: `AppSettingExcludedItem`

Supports: `-WhatIf` , `-Confirm`

Examples

Recast

```
# Exclude a temporary folder under an already-created included item
$setting = Get-LiquitAppSetting -Name 'Outlook Settings'
$includedItem = $setting.IncludedItems[0]
```

```
New-LiquitAppSettingExcludedItem `
  -Parent $includedItem `
  -Name 'Exclude Temp' `
  -ValueType Folder `
  -Value 'Temp'
```

```
# Exclude all .log files
New-LiquitAppSettingExcludedItem `
  -Parent $includedItem `
  -Name 'Exclude Logs' `
  -ValueType FileExtension `
  -Value 'log'
```
