Recast

Set RMS/Recast Cloud URL by Policy

Last Modified on 2026-10-15

As a Right Click Tools administrator, you can pre-define a default Recast Management Server/Recast Cloud URL using a registry value. Setting the URL ahead of time prevents RCT Browser Extension users from having to manually configure this browser extension setting in order to run multi-device actions and some advanced features, like the System Information side panel.

NOTE: A registry-defined value will not overwrite an existing user-configured RMS URL.

Minimum Right Click Tools version: 5.12.2609.1102

Configure the RMS/Recast Cloud URL

To set the RMS/Recast Cloud URL in the Registry:

Set the **ServerUri** value in the Registry key for the browser you're using:

- Edge – `HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Edge\3rdparty\extensions\<policy_name>\policy`
- Chrome – `HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Google\Chrome\3rdparty\extensions\<policy_name>\policy`

Refresh Browser Policies (optional)

Your browser's policies will update automatically, but you can also choose to manually trigger an update.

To force an immediate refresh of your browser's policies:

1. Open **edge://policy** or **chrome://policy**.

2. Click **Reload Policies** to refresh the applied settings.

Check Policy Application

To check that the policy is applied:

1. Open the Browser Extension's **Right Click Tools Configuration** window by clicking on the Recast icon in your browser toolbar followed by the **Configure** button.

2. Confirm that the policy-managed configuration appears.
