Agent.json File Overview

Last Modified on 2026-11-04

Agent.json file location

By default, the `Agent.json` file is placed in the Agent folder after an installation:

Platform	Path
Windows	%ProgramData%\Liquit\Agent\Agent.json
macOS	/Library/Application Support/com.liquit.Agent/Agent.json

For both Windows and macOS operating systems:

- You need to restart both the UserHost and the Agent to apply changes made to the `Agent.json` file.
- In case you decide to place the JSON file in another location, we recommend you restart the Application Workspace service after each change of the file so that they are applied.

Sample of an agent.json configuration

```
{
 "zone": "https://workspace.liquit.com",

 "registration": {
  "type": "Certificate"
 },

 "login": {
  "sso": true
 },

 "log": {
  "level": "Debug"
 }
}
```

Backslashes '\' should be escaped within a JSON file. So that a single '\' will be a '\\'.
JSON keys are case sensitive. For example, "autostart" will not work, but "autoStart" will work.
