

CSV Apps & Matches

Last Modified on 2026-09-25

CSV Apps tab

Displays applications loaded from the configured CSV file after Get Data runs.

Columns visible by default: application name, publisher, version

Use the search box to filter, export the loaded rows back to CSV, or use Browse & Load CSV to reload manually.

CSV Matches tab

Displays fuzzy-match results between CSV inventory and Zone resources.

No package import is available — this source is inventory and matching only.

Use **Merge Duplicates** to collapse multiple CSV entries for the same application name, keeping the highest-scoring match.

Columns visible by default: ✓ (select), Exists, CSV Name, CSV Publisher, CSV Version, Best Zone Name, Best Zone Version, Score

Hidden columns: Reason, Zone Resource Created, Zone Resource ID
