Recast

Customize Enabled Right Click Tools by Policy

Last Modified on 2026-10-29

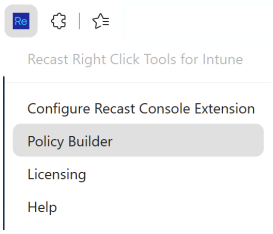

You can use policy settings to customize the Right Click Tools actions that are visible and available via the Browser Extension. Once configured, your Right Click Tools menus will reflect only the RCT actions that are allowed by policy in your environment.

Minimum Browser Extension version: 3.5.0.0

Choose Actions to Enable

To customize the available actions:

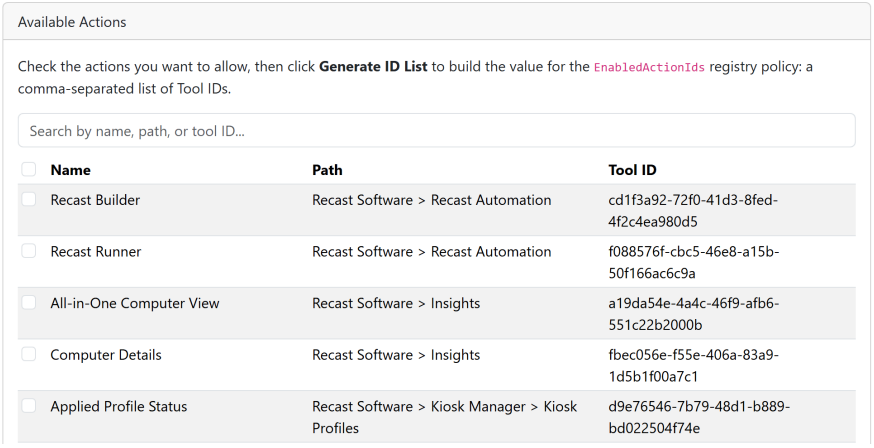

1. Right-click on the Recast icon in your browser toolbar and select **Policy Builder** from the drop-down.

On the **Policy Builder** page that opens, you will see the specific Registry key for your browser:

- **Chrome**
  - `HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Google\Chrome\3rdparty\extensions\gfbiiepahoibecndlolalkhkcpfdddjk\policy`
- **Edge**
  - `HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Microsoft\Edge\3rdparty\extensions\hdlmknneafgigmdleldiicnkgkcgdlfl\policy`

2. Enable the desired actions for your policy.

3. Click **Generate ID List** to compile a list of Tool IDs for the selected actions.

4. Click **Copy to Clipboard** to copy the list for use in policy configuration.

Configure the Policy

Use your organization's method to deploy the generated ID list to managed endpoints. You can use Microsoft Intune, Group Policy, Configuration Manager, scripts, or other deployment tools.

The Registry values to set are `ServerUri` and `EnabledActionIds`.

Once applied, Right Click Tools will automatically recognize and enforce the policy.

Refresh Browser Policies (optional)

Your browser's policies will update automatically, but you can also choose to manually trigger an update.

To force an immediate refresh of your browser's policies:

1. Open **`edge://policy`** or **`chrome://policy`**.

2. Click **Reload Policies** to refresh the applied settings.

Check Policy Application

To check that the policy is applied:

1. Open the Browser Extension's **Right Click Tools Configuration** window by clicking on the Recast icon in your browser toolbar followed by the **Configure** button.

2. Confirm that the policy-managed configuration appears.

When policy management is active, users see a message similar to the following:

> *This instance of Recast Right Click Tools for Intune is being managed by policy. Currently, 10 of 83 actions are enabled. Please reach out to your administrator to request additional actions.*
