Restrict Zones

Last Modified on 2026-11-04

Define which Zones are always allowed to communicate with the local Agent. By default, the value is set to **false**' and communication to the local Agent is not restricted to defined zones.

```
{
  "restrictZones": false
}
```

If set to '**true**', only the zones you list will have access to the local Agent.

If set to '**false**', an alert asks the user to confirm that the zone is allowed to access the local Agent.
