Recast

Right Click Tools Version 5.13.2611

Last Modified on 2026-11-19

Release Date: November 19, 2026

Right Click Tools Version 5.13.2611.1809 includes new features and bug fixes.

You can find instructions for installing this version in our articles on updating Right Click Tools, Insights, Privileged Access, and Patching.

Features

Right Click Tools Enterprise & Community

Manage Multiple Devices at Once with Remote Event Viewer

Recast's Remote Event Viewer now supports viewing multiple devices simultaneously.

Bonus Remote Event View Refinements:

- Horizontal scroll bar for improved usability on smaller screens
- Refresh action moves out of the ellipsis menu for quicker, one-click access

Find Remote Tools Faster in Intune

Recast's Remote Registry, Remote Event Viewer, and Remote File Explorer tools are now accessible directly from the Recast side panel. Not sure where that is? See Run Multi-Device Actions in Intune.

Deploy Applications Without a Patching License

Right Click Tools Enterprise customers can now deploy some common applications using RCT Patching, even without a Patching license.
Along with the Recast Agent and Right Click Tools applications that are already available from the Recast Catalog, you can now deploy Microsoft Edge, Google Chrome, Mozilla Firefox, Brave, and Notepad++. For steps, see Add an Application to a Deployment Process.

Right Click Tools Insights

Track Application Status on Your Devices

The new **Application Lifecycle** page gives you a quick way to identify all devices running a specific application or application version, which makes for a deeper understanding of deployment scope and risk. To learn more, see View Application Lifecycle Information.

Quicker OData Inventory Queries and Improved Scalability

Insights now offers better OData inventory query performance and scalability to larger environments. See Connect Power BI to Insights with OData.

Right Click Tools Patching

Deploy macOS Applications as DMG Packages

Recast

You can now include macOS applications in Intune deployment processes using a .dmg virtual image type. This feature expands macOS deployment capabilities added in last month's Right Click Tools 5.13.2610 release.

Automatic Deployment Reset Upon Recast Management Server Restart

Running deployment processes automatically reset when the Recast Management Server restarts, preventing processes from stalling.

Bug Fixes

Right Click Tools Enterprise & Community

Firewall Status: The Console Extension now correctly displays the 'Enabled' state for Windows Firewall when the setting is managed by a group policy. (Customer-Reported Bug 74493)

Browser Extension: Toolbar menu clicks are now reliably registered instead of being intermittently ignored.

Type-to-Select Navigation: Remote Registry and Remote File Explorer now correctly handle type-to-select scrolling behavior.

Filter Validation: Remote Event Viewer's 'Event ID' and 'Max Entries' filters now properly reject non-numeric values.

Right Click Tools Patching

Package Download: Large package downloads no longer fail due to the default 100-second HttpClient timeout. (Customer-Reported Bug 92562)
