Recast

Signature validation failed

Last Modified on 2026-11-11

Problem

A **'Signature validation failed'** error displays on the RCT Patching **Deployment Processes** page.

Likely Cause

The 'Signature validation failed' may appear if the Recast Proxy has an old SQLite file, meaning a stale enrollment. You can fix the issue by re-enrolling the Proxy:

To manually re-enroll the Recast Proxy:

1. Stop the **Recast Proxy service.**

2. Delete all .sqlite files located at `C:\Users\<Proxy User Account>\AppData\Roaming\Recast Software\Recast Proxy`.

3. Restart the Recast Proxy service.

You can then rerun the deployment process.
