View Application Lifecycle Information

Last Modified on 2026-11-17

The Insights **Application Lifecycle** page displays application and device details that help identify outdated and vulnerable software, and determine which endpoints require action.

You can find the page in your Recast Management Server or Recast Cloud instance by navigating to**Insights** > **Application Lifecycle**.

Prerequisites

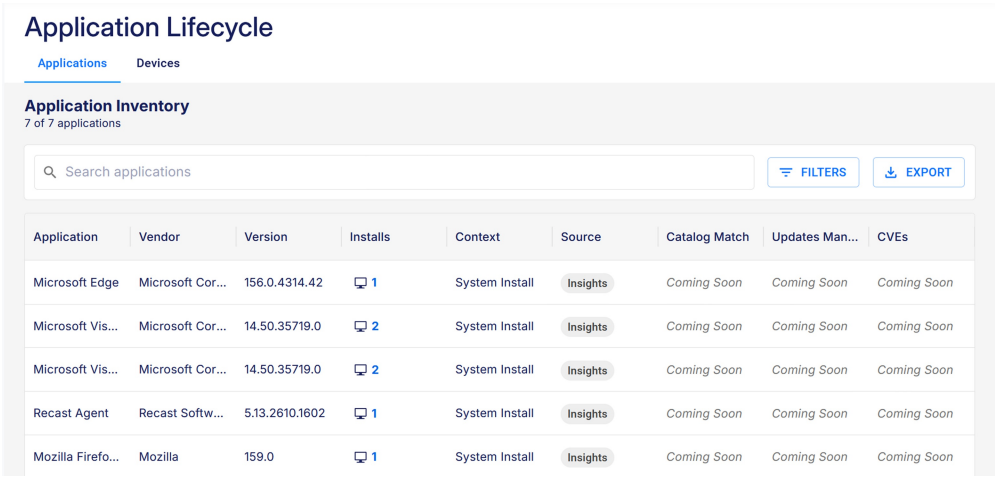

- Right Click Tools Insights license
- Insights installed with Recast Management Server and Recast Proxy
- Minimum Recast Software Version: 5.13.2611

Actions Available for Applications and Devices Views

- Search for specific applications or devices
- Apply **Filters**
- **Export to CSV**, which can export unfiltered and filtered data.
- Customize your view by resizing, locking, adding or deleting columns. Click the vertical ellipsis next to a column heading to see options.

Applications View

The **Application Lifecycle – Applications** view displays details including the vendor name and version number, as well as the number of devices where the application is installed.

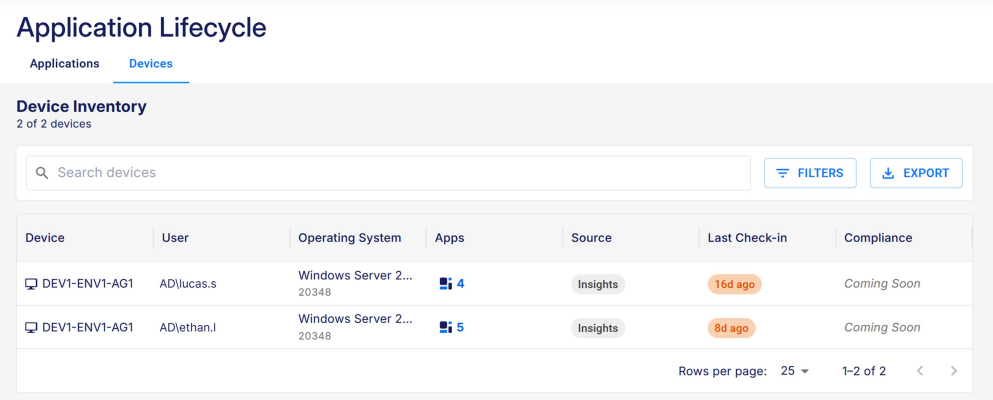

Details shown for each application:

- Vendor
- Version
- Installs – Number of devices on which the application is installed. Click the number for a filtered view of devices where the application is installed.
- Context – System Install
- Source of the data
  - Insights inventory
  - Catalog – Coming soon
- Catalog Match – Coming soon
- Updates Management – Coming soon

- CVEs – Coming soon

Devices View

The **Application Lifecycle – Devices** view displays details such as the number of applications installed on a specific device.

Details shown for each device:

- User – User account linked to the device
- Operating System
- Apps – Number of applications on the device. Click the number for a filtered view of applications installed on the device.
- Source of the data
  - Insights inventory
  - Catalog – Coming soon
- Last Check-in – Number of days since the device last checked in
- Compliance – Coming soon
